## Contents

### PART 1 Environmental Signals and Normal Development

#### CHAPTER 1 The Environment as a Normal Agent in Producing Phenotypes  3

- **Plasticity Is a Normal Part of Development** 6
  - BONELLA VIRIDIS: WHEN THE ENVIRONMENT DETERMINES SEX 6
  - A century of studies 7
  - A contextually integrated view of life 8
- **“Eco-Devo” and Developmental Plasticity** 9
  - Reaction norms and polyphenisms 11
  - Epigenetics 12
  - Agents of developmental plasticity 13
- **Temperature-Dependent Phenotypes** 13
  - Enzyme activity as a function of temperature 13
  - Seasonal polyphenism in butterflies 16
  - Temperature and sex 17
- **Nutritional Polyphenism: What You Eat Becomes You** 20
  - Royal jelly and egg-laying queens 20
  - Horn length in the male dung beetle 21
- **Gravity and Pressure** 23
- **Predator-Induced Polyphenisms** 26
  - Predator-induced polyphenism in invertebrates 27
  - Predator-induced polyphenism in vertebrates 27
- **The Presence of Con specifics: It’s Who You Know** 29
  - A swarm of locusts: Polyphenism through touch 30
- **POLYPHENISMS AND CONSERVATION BIOLOGY** 31
  - Sexual polyphenism by the community environment 32
- **Convergence on Favorable Phenotypes** 32
- **Summary** 32
- **References** 33

#### CHAPTER 2 How Agents in the Environment Effect Molecular Changes in Development  37

- **Regulation of Gene Transcription** 38
  - Differential gene expression 38
  - DNA methylation 42
  - Environmental agents and direct DNA methylation 43
  - The effects of maternal behavior on gene methylation 44
- **Signal Transduction from Environment to Genome via the Neuroendocrine System** 46
  - VERNALIZATION: TEMPERATURE-DEPENDENT CHROMATIN CHANGES 47
  - Neuroendocrine regulation of temperature-dependent polyphenism in insects 49
  - Neuroendocrine regulation of sex determination 51
- **SEX, AROMATASE, AND CONSERVATION BIOLOGY** 54
  - An extreme phenotype for extreme times: Stress and cannibalism 57
  - “We will pump you up”: Muscle hypertrophy 59
- **ANABOLIC STEROIDS** 62
- **Signal Transmission from Environment to Genome through Direct Induction** 64
  - Microbial induction of gene expression in vertebrate intestines 64
  - Microbial induction of the vertebrate immune response 65
- **Transgenerational Effects** 67
  - Transgenerational polyphenism in locusts 68
  - Transgenerational predator-induced polyphenisms 68
  - Methylation and transgenerational continuity: Toadflax 70
  - Methylation and transgenerational continuity: Mice and rats 71
- **Summary** 74
- **References** 74

CHAPTER 3 Developmental Symbiosis: Co-Development as a Strategy for Life
Symbiosis: An Overview
The “Grand” Symbioses
Nitrogen-fixing nodules
ENDOPHYTES
Mycorrhizae
Life Cycle Symbioses
THE LARGE BLUE BUTTERFLY
Getting Symbionts Together with Their Hosts
The Squid and the Microbe: A Paradigm of Symbiont Influence
Evolution of the Symbiotic Regulation of Development: Wolbachia
Sex determination by infection
Evolution of dependence on Wolbachia for sexual development
MUTUALISTIC CONSORTIA
The Mutualistic Bacteria of the Mammalian Gut
Introduction to the gut microbiota
Maintaining the gut microbial community: The biofilm model
Inheritance of the gut bacteria
Gut Bacteria and Normal Mammalian Development
An important role for symbiotic bacteria in the normal development of the host’s gut:
Angiogenesis induction
The impact of symbiotic gut bacteria on the development of the host immune system:
Antimicrobial secretions
IMMUNITY THROUGH DEVELOPMENTAL SYMBIOSIS
B lymphocytes and the GALT
IMMUNE SYSTEM CELL TYPES
Gut Bacteria Symbiosis and Human Health
Bacterial regulation of the immune response
The role of the gut bacteria in fat storage:
Implications for human obesity
Further implications of the enteric gut bacteria for human health
Summary
References

CHAPTER 4 Embryonic Defenses: Survival in a Hostile World
Characteristics of Embryo Defense
Developmental robustness: A necessary but paradoxical defense
Early embryonic cells differ from adult cells
SPECULATIONS ON CELL DEFENSES IN EARLY DEVELOPMENT
Strategies for Embryo Defense
Strategy 1: Induced polyphenism
Strategy 2: Parental protection
Strategy 3: Dormancy and diapause
THE DAUERLARVA OF C. ELEGANS
Strategy 4: Defense physiologies
A general strategy: “Be prepared”
Mechanisms of Embryo Defense
Protection against Toxic Substances
The general plan: “Bouncers,” “chemists,” and “policemen”
Toxic metals
Problems with metal detoxification
Protection against Physical Damage
Shells and extracellular coats
Cytoplasmic sealing
Protection against Oxidative Damage
Protection against Damage to DNA
Sunscreens prevent DNA damage
Repairing damaged DNA
Protection against Pathogens
Parental behavior
Chemical protection
Embryonic immune responses
Symbiosis and protection from fungi
Protection from Predation
Summary

PART 2  Ecological Developmental Biology and Disease States

CHAPTER 5  Teratogenesis: Environmental Assaults on Development  167

Medical Embryology and Teratology  168
   Wilson’s principles of teratology  169
   Thalidomide and the window of susceptibility  170
Teratogenic Agents  172
   Chemical teratogens: Industrial mercury and Minamata disease  172
   Alcohol as a teratogen  173
   Retinoic acid  180
TERATOGENS AND COGNITIVE FUNCTION 182
   Other teratogenic agents  183
Natural Killers: Teratogens from Plants  185
   Veratrum alkaloids  185
   Plant juvenile hormones  187
Deformed Frogs: A Teratological Enigma  189
   A combination of factors  189
   The radiation hypothesis  190
   Pesticides and herbicides  190
CONSERVATION BIOLOGY: SAVING THE FROGS  191
Summary  191
References  192

CHAPTER 6  Endocrine Disruptors  197

The Nature of Endocrine Disruptors  198
   The endocrine disruptor hypothesis  199
   DDT: The start of it all  200
   ESTABLISHING A CHAIN OF CAUSATION  202
Estrogen and Endocrine Disruptors  203
   The structure and mechanisms of estrogen receptors  204
   Diethylstilbestrol  206
   Mechanisms of DES action  208
   Soy estrogens  212
   Declining sperm counts and testicular dysgenesis syndrome  213
   Pesticides and infertility in males  215
SENSITIVITY TO DISRUPTION: A GENETIC COMPONENT  216
   Atrazine, again  217
Plastics and Plasticity  220
   Bisphenol A  221
   The dose-response curve of BPA action  225
   The molecular biology of the BPA effect  226
   Epigenetic effects of BPA  228
   Polychlorinated biphenyls  229
   Possible mechanisms for the effects of PCBs  230
Transgenerational Effects of Endocrine Disruptors  230
Summary  233
REGULATORY AND POLICY DECISIONS ON BPA AND OTHER ENDOCRINE DISRUPTORS  234
References  237

CHAPTER 7  The Epigenetic Origin of Adult Diseases  245

The Developmental Origins of Health and Disease  246
Instructing the Fetus  247
   Maternal-fetal co-development  248
   Fetal plasticity in humans  250
   Gene methylation and the fetal phenotype  253
Predictive Adaptive Responses  256
   The environmental mismatch hypothesis  260
   Environment-genotype interactions in diabetes  263
PATERNAL EPIGENETIC EFFECTS  264
Developmental Plasticity and Public Health  266
Aging and Cancer as Diseases of Epigenesis  267
Epigenetic Methylation, Disease, and Aging  267
   Evidence from identical twins  268
   Aging and random epigenetic drift  270
Epigenetic Origins of Cancer  273
   Cancer as caused by altered epigenetic methylation  274
   The reciprocity of epigenetic and genetic causation in cancer  277
   The tissue organization field hypothesis  278
Summary  283
References  283
### PART 3 Toward a Developmental Evolutionary Synthesis

#### CHAPTER 8 The Modern Synthesis: Natural Selection of Allelic Variation 289

**Charles Darwin’s Synthesis 291**
- Classical Darwinism: Natural selection 292
- Selection for Heritable Plasticity 299
- Embryology and Darwin’s synthesis 299
- The failure of developmental morphology to explain evolution 303

**The Modern Synthesis 304**

**STURTEVANT ON SNAILS 305**

**The Triumph of the Modern Synthesis: The Globin Paradigm 310**
- Hemoglobin S and sickle-cell disease 311
- Malaria and Evolution 312
- Favism 316

**Summary 318**

**References 320**

#### CHAPTER 9 Evolution through Developmental Regulatory Genes 323

**The Origins of Evolutionary Developmental Biology 324**

**Molecular Parsimony: “Toolkit Genes” 326**
- Duplication and divergence: The Hox genes 327
- Homologous pathways of development 332
- Toolkit genes and evolution: A summary 334

**Modularity: Divergence through Dissociation 336**
- Enhancer modularity 337
- Malaria, again 341

**Mechanisms of Macroevolutionary Change 342**
- Heterotopy 342
- Heterochrony 344
- Heterometry 345
- Heterotypy 350

**Speciation 354**
- Speciation in the Modern Synthesis 354
- Regulatory RNAs may help make us human 356

**Developmental Constraints on Evolution 358**
- Physical constraints 358
- Morphogenetic constraints 359
- Phylogenetic constraints 359
- Reaction-Diffusion Models 360

**Summary 362**

**References 363**

#### CHAPTER 10 Environment, Development, and Evolution: Toward a New Synthesis 369

**Epigenetic Inheritance Systems 370**

**Heterocyberny: Plasticity-Driven Adaptation 372**

**Phenocopies and Ecotypes 373**

**Genetic Assimilation 375**
- Genetic assimilation in the laboratory 377
- Genetic assimilation in nature: Mechanisms, models, and inferences 379
- Thresholds of Genetic Assimilation 380
- Genetic assimilation and natural selection 381
- Epigenetic Assimilation: Another Hsp90 Story 383

**Genetic Accommodation 384**

**Phenotypic Accommodation 386**
- Evolutionary considerations 387
- Developmental mechanisms of phenotypic accommodation 389
- Reciprocal accommodation 390

**Niche Construction 391**

**Summary: Eco-Evo-Devo 395**

**References 398**
