Brief Contents

Basic Concepts  xxi

1. Principles of Pharmacology  1
2. Methods in Neuropsychopharmacology  27
3. Neurons and Glial Cells  75
4. Functional Neuroanatomy  111
5. Neurophysiological Mechanisms  155
6. Synaptic Structure and Function  185

Neurotransmitter Systems  233

7. Acetylcholine  235
8. Catecholamines  277
9. Serotonin  345
10. The Amino Acid Neurotransmitters and Histamine  391
11. Peptide Neurotransmitters  455

Major Drug Classes  493

12. The Opiates  495
13. Stimulants: Amphetamine and Cocaine  549
14. Stimulants: Nicotine and Caffeine  591
15. Alcohol  625
16. Sedative–Hypnotic and Anxiolytic Drugs  673
17. Mind-Altering Drugs  731

Clinical Applications  781

18. Schizophrenia  783
19. Affective Disorders  819
20. Parkinson’s Disease and Alzheimer’s Disease  861
Contents

BASIC CONCEPTS  xxii

1. Principles of Pharmacology  1
   Determinants of Drug Action  1
   Route of Administration  2
   Drug Absorption and Distribution  5
      Effects of Age, Sex, and Body Size  6
   Drug Transport across Membranes  6
   Drug Binding  12
      Depot Binding  12
      Receptor Binding  13
      Law of Mass Action  13
      Dose–Response Relationships  14
      Side Effects and the Therapeutic Index  15
      Receptor Antagonists  16
   Drug Inactivation and Elimination  17
      Drug Clearance  17
      Drug Metabolism  17
      Renal Excretion  19
   Tolerance and Sensitization  20
      Cross Tolerance  21
      Drug Disposition Tolerance  21
      Pharmacodynamic Tolerance  22
      Behavioral Tolerance  22
      Tolerance by Indirect Mechanisms  23
      Sensitization or Reverse Tolerance  24
      Placebo Effects  24
   Summary  25

2. Methods in Neuropsychopharmacology  27
   Part I Neurochemical Techniques  28
      Neurotransmitter Measurement and Localization  28
         Histofluorescent Techniques  28
      Immunocytochemistry  29
      Autoradiography  31
      In Situ Hybridization  31
      Immunoassay Techniques  35
      Column Chromatography  36
      In Vivo Microdialysis  39
      Electrochemistry  41
      Receptor Measurement and Localization  43
         Radioligand Binding  43
         Interpretation of Ligand–Receptor Binding  43
         Ligand–Receptor Kinetics  46
         Mathematical Transformations and Data Plotting  48
      Receptor Autoradiography  49
      Receptor Isolation and Labeling  50
      Brain Metabolism and Imaging Methods  51
         Enzyme Kinetics  51
         Autoradiography of Dynamic Cell Processes  52
         In Vivo Imaging  54
   Part I Summary  56
   Part II Techniques in Behavioral Pharmacology  57
      Animal Care Guidelines  57
      New Drug Evaluation  58
      Primary Evaluation  59
         Measures of Motor Activity  59
         Interactions with Other Drugs  60
      Secondary Evaluation  60
         Measures of Analgesia  60
         Tests of Learning and Memory  61
         Measures of Spatial Learning  63
         Tests of Delayed Reaction  64
         Measures of Anxiety  65
      Schedule-Controlled Behavior  66
         Positive Reinforcement Schedules  67
      Drug Effects and Baseline Response Rate  69
      Negative Reinforcement and Punishment  69
      Drugs Used as Discriminative Stimuli  71
   Part II Summary  73

3. Neurons and Glial Cells  75
   Neuron Function  75
   Neuron Morphology  76
   Microanatomy of Neurons  77
      The Cell Body  77
      The Nucleus and Nucleolus  78
      Mitochondria  80
      Peroxisomes  80
      Lysosomes and Endosomes  81
      The Neuronal Cytoskeleton: Microtubules, Neurofilaments, and Actin Filaments  81
   Genetic Activity within Neurons  82
      DNA Structure  82
      The Permanence of the Genetic Code  83
      Gene Transcription  83
      Gene Translation  85
      Protein Destination  87
      The Role of the Endoplasmic Reticulum  87
      The Smooth Endoplasmic Reticulum and the Golgi Apparatus  87
   Dendrites  88
      Learning and Dendritic Changes  90
   Axons  90
      Axon Dimensions  91
      Axonal Collaterals  92
      Axonal Transport  92
   The Nerve Cell Membrane  95
      Membrane Structure  95
      Transport across Membranes  99
   Neuroglia  103
      Myelin and Myelination  104
      Myelin Formation  105
      Chemical Factors in Myelination  106
4. Functional Neuroanatomy 111

Part I  The Spinal Cord, Brain Stem, Diencephalon, Limbic System, and Basal Ganglia 113

The Spinal Cord 113
The Brain Stem 116
The Cranial Nerves 116
The Cerebellum 119
The Reticular Formation 121
The Midbrain 122
The Diencephalon 125
The Thalamus 125
The Hypothalamus and Limbic System 126
The Basal Ganglia 130

Part II  The Cerebral Cortex 132

The Telencephalon 132
The Cerebral Cortex 133
Function of the Corpus Callosum 133
Cortical Cell Morphology 134
Organization of the Cortex 135
Functional Localization in the Neocortex 136
Cortical Control of Movement 139
Language Functions of the Cerebral Cortex 142

Part III  The Autonomic Nervous System 144

The Enteric System 146
The Parasympathetic System 146
The Sympathetic System 149

Part IV  Neurotransmitter Systems 233

7. Acetylcholine 235

Part I  Acetylcholine Neurochemistry: Synthesis, Storage, Release, and Inactivation 235

Acetylcholine Synthesis 237
Choline Acetyltransferase 237
The Sources of Acetylcholine Precursors 237
Regulation of Acetylcholine Synthesis 238
Acetylcholine Storage and Release 239
Miniature End-Plate Potentials 239
The Source of Quantally Released Acetylcholine 240
Cholinergic Vesicles and Biochemical Pools of Acetylcholine 249
Acetylcholine Inactivation 242

© Sinauer Associates, Inc. This material cannot be copied, reproduced, manufactured or disseminated in any form without express written permission from the publisher.
Behavioral Functions of Norepinephrine 340
The Role of Norepinephrine in Attention, Arousal, and Vigilance 340
Regulation of Hunger and Feeding Behavior 341
Part III Summary 343

9. Serotonin 345
Part I Serotonin Neurochemistry: Synthesis, Storage, Release, and Inactivation 346
Serotonin Synthesis 346
Tryptophan Hydroxylase 346
Tryptophan Hydroxylase Inhibitors 346
5-Hydroxytryptophan Decarboxylation 348
Regulation of Serotonin Synthesis 348
Serotonin Storage and Release 352
Mechanisms of Storage and Release 352
Serotonin-Relasing Drugs 352
Regulation of Serotonin Release by Autoreceptors 353
Serotonin Inactivation 355
Serotonin Uptake 355
Serotonin Uptake Inhibitors 356
Metabolism of Serotonin 356
Measurement of Serotonin Turnover 357
Serotonin Neurotoxins 358
Blood Platelets as a Model for Serotonergic Neurons 360
Part I Summary 361

Part II Anatomy and Physiology of Serotonergic Systems 361
Distribution of Serotonin Neurons in the Nervous System 361
Serotonergic Pathways in the Brain 362
Location of Other Serotonergic Cells 365
Electrophysiology of Serotonergic Neurons 366
Serotonin Receptors 367
Serotonin Receptor Subtypes 367
5-HT_1 Receptors 369
5-HT_2 Receptors 373
5-HT_3 Receptors 376
5-HT_4 Receptors 377
Serotonin Receptor Mechanisms 378
Part II Summary 379

Part III Behavioral Functions of Serotonin 380
Feeding Behavior and Body Weight Regulation 380
Changes in Serotonergic Activity Associated with Feeding 380
Effects of Serotonergic Drugs on Food Intake 380
Serotonin and Obesity 382
Serotonin and Aggression 383
The Role of Serotonin in Animal Aggression 383
Serotonin and Human Aggression 386
Is There a Link between Animal and Human Research? 387
Serotonin and Obsessive–Compulsive Disorder 388
Part III Summary 389

10. The Amino Acid Neurotransmitters and Histamine 391
Part I Excitatory Amino Acids: Glutamate and Aspartate 391
Amino Acids 391
Glutamate and Aspartate as Neurotransmitters 392
Synthesis and Metabolism of Glutamate and Aspartate 392
Synthesis 392
Catabolism 395
Storage, Release, and Uptake of Glutamate and Aspartate 396
Vesicular Storage and Release 396
Synaptic Uptake 396
Localization of Glutamatergic and Aspartatergic Pathways 396
Excitatory Amino Acid Receptors 398
Ionotropic Receptors 398
Metabotropic Receptors 404
Distribution of Excitatory Amino Acid Receptors 404
The Role of Excitatory Amino Acids in Neural and Behavioral Functions 405
Amino Acid Excitotoxicity 405
Excitatory Amino Acids, Synaptic Plasticity, and Learning 410
Part I Summary 416

Part II Inhibitory Amino Acids: GABA 417
The Discovery of GABA and Its Identification as a Neurotransmitter 417
Synthesis and Metabolism of GABA 417
Regulation of GABA Synthesis 418
Drugs That Affect GABA Synthesis and Metabolism 420
Storage, Release, and Uptake of GABA 421
Vesicular Storage and Release 421
Synaptic Uptake 421
GABA Distribution 422
Anatomy of GABA Pathways 422
GABA_A Receptors 423
Pharmacology of the GABA_A Receptor Complex 423
Benzodiazepines and the GABA_A Receptor 425
Barbiturates and the GABA_A Receptor 429
Steroid Hormones and the GABA_A Receptor 429
Ethanol and the GABA_A Receptor 430
Structure of the GABA_A Receptor Complex 431
Regulation of GABA_A Receptors 433
GABA_B Receptors 434
Pharmacology of GABA_B Receptors 434
GABA_B Receptor Mechanisms 435
GABA_C Receptors 435
The Role of GABA in Physiological and Behavioral Functions 435
Presynaptic Inhibition 436
GABA and Epilepsy 436
Part II Summary 439

Part III Inhibitory Amino Acids: Glycine 441
Synthesis and Metabolism of Glycine 441
Storage, Release, and Uptake of Glycine 441
Anatomy of Glycine Pathways 442
The Glycine Receptor 442
Glycine Pharmacology and Behavioral Functions 442
Part III Summary 444

Part IV Histamine 445
Histamine Synthesis, Release, and Inactivation 445
Synthesis and Release 445
Sources and Distribution of Histamine in the Brain
MAJOR DRUG CLASSES 493

12. The Opiates 495

Part I General Pharmacology: History, Identity, and Use 495

Structure–Activity Relationships 496
Pharmacodynamics: Absorption and Excretion 497
Physiological and Behavioral Effects 497
CNS Effects 497
Gastrointestinal Effects 498
Part I Summary 498

Part II Opiate Receptors 498
Receptor Characteristics 498
Receptor Binding Studies 499
Biochemical Characterization of Opiate Binding 499
Ionic Requirements 499
Opiate Bioassay 500
Opiate Receptor Subtypes 500
Opiate Receptor Pharmacology and Localization within the CNS 501
Molecular Cloning of Opiate Receptor Subtypes 503
Cellular Mechanisms of Action 505
G Protein Mediation 505
Opiate Receptors Regulate Ion Channels 506
Inhibition of Adenylyl Cyclase 506
Part II Summary 507

Part III Endogenous Opioid Peptides 508
Three Families of Peptides 508
Opioid Peptide Processing 508
Localization and Regulation 510
Inactivation 512
Relationship to Receptor Subtypes 513
Functional Effects of Opiates and Opioid Peptides 514
Methodology 514
Effects on Synaptic Processes 515
Analgesia 518
Pain Pathways 519
Analgesic Effects of Opioids 522
Localization of Opioid Analgesia 523
Opiate Effects on Gastrointestinal Function 524
Opiates and Development 525
Learning and Memory 525
Opioid Effects on Food Consumption 526
Endogenous Opiates in Social Behavior 527
Endogenous Opiates and Psychiatric Disorders 528
Affective Disorders 528
Schizophrenia 529
Endorphins and Autism 530
Part III Summary 530

Part IV Opiate Dependence and Abuse 530
General Features of Drug Abuse 530
Diagnostic Criteria 530
Biopsychosocial Model of Substance Dependence and Abuse 531
Consequences of Opiate Use 532
Tolerance 532
Physical Dependence 532
Psychological Dependence 534
Opiates as Reinforcers 534
Methods of Assessing Drug Reinforcement 534
Mechanisms of Opiate Reward 536
Neurochemical Mechanisms of Opiate Tolerance and Dependence 538
Down-Regulation of Opioid Peptide Synthesis 538
Role of Receptor Changes 539

© Sinauer Associates, Inc. This material cannot be copied, reproduced, manufactured or disseminated in any form without express written permission from the publisher.
## 13. Stimulants: Amphetamine and Cocaine 549

### Part I Amphetamine 549

- Basic Pharmacology of Amphetamine 550
- Mechanisms of Amphetamine Action 552
  - Neurochemical Effects on Catecholamine Systems 552
  - Other Neurochemical Effects 555
  - Electrophysiological Effects 555
- Acute Behavioral and Physiological Effects of Amphetamine in Humans 556
- Effects on Mood and Behavior 556
- Physiological Effects 556
- Therapeutic Uses of Amphetamine 557
- Acute Behavioral Effects of Amphetamine in Animals 558
  - Locomotor and Stereotyped Behaviors 558
  - Schedule-Controlled Behavior 559
  - Discriminative Stimulus Properties of Amphetamine 559
- Reinforcing Effects of Amphetamine 560
- Mechanisms Underlying Behavioral Effects of Amphetamine 561
- Amphetamine Abuse and the Effects of Chronic Amphetamine Exposure 564
  - Initiation and Progression of Amphetamine Abuse 564
  - Amphetamine Tolerance and Sensitization 564
  - Amphetamine Dependence 565
  - Amphetamine Psychosis 566
- Neurotoxic Effects of Amphetamine 566

### Part II Cocaine 568

- Basic Pharmacology of Cocaine 569
- Mechanisms of Cocaine Action 570
  - Neurochemical Effects on Monoamine Systems 570
  - Other Neurochemical Effects 571
  - Electrophysiological Effects 572
- Acute Behavioral and Physiological Effects of Cocaine in Humans 573
  - Effects on Mood and Behavior 573
  - Physiological Effects 574
- Acute Behavioral Effects of Cocaine in Animals 574
  - Reinforcing Effects of Cocaine 574
  - Mechanisms Underlying the Behavioral Effects of Cocaine 576
- Is There a Common Neural Mechanism Underlying the Reinforcing Effects of All Abused Drugs? 579
- Cocaine Abuse and the Effects of Chronic Cocaine Exposure 580
  - Initiation and Progression of Cocaine Abuse 580
  - Cocaine Tolerance and Sensitization 581
  - Cocaine Dependence 582
  - Cocaine Psychosis 584

## 14. Stimulants: Nicotine and Caffeine 591

### Part I Nicotine 591

- Basic Pharmacology of Nicotine 592
- Tobacco: A Vehicle for Delivering Nicotine 592
- Metabolism of Nicotine 592
- Acute Behavioral and Physiological Effects of Nicotine 593
  - Reinforcing Effects 593
  - Psychomotor Performance 594
  - Peripheral Physiological Effects 596
  - Physiological Effects on the CNS 597
  - Toxic Effects of Nicotine 597
- Carbon Monoxide Toxicity 597
- Mechanisms of Nicotine Action 598
- Nicotinic Receptors 598
- Neural Mechanisms of Nicotine-Induced Behavioral Effects 598
- Who Are the Smokers and Why Do They Smoke? 599
  - Characteristics of Smokers 599
  - Determinants of Smoking Behavior 600
  - Commercial Promotion of Smoking and Tobacco Products 601
- Effects of Chronic Tobacco Use 603
  - Nicotine Tolerance 603
  - Nicotine Abstinence and Withdrawal Symptoms 604
  - Health Effects of Smoking 605
- Treatment Strategies for Nicotine Dependence 606
  - Characteristics of Nicotine Dependence 606
  - Treatment Goals 606
  - Behavioral Interventions 606
  - Pharmacological Interventions 607

### Part II Caffeine 611

- Basic Pharmacology of Caffeine 612
- Acute Behavioral and Physiological Effects of Caffeine 612
- Therapeutic Uses of Caffeine 614
- Effects of Chronic Caffeine Exposure 614
  - Caffeine Tolerance and Sensitization 614
  - Caffeine Dependence 614
  - Adverse Physiological Effects of Chronic Caffeine Consumption 615
- Mechanisms of Caffeine Action 615
  - Adenosine 616
  - Adenosine Antagonism as the Mechanism of Caffeine Action 620

### Part II Summary 623

## 15. Alcohol 625

- Alcohol Pharmacokinetics 626
- Alcohol Absorption and Distribution 626
- Alcohol Metabolism 627
- Alcohol Use and Abuse 629
  - The Prevalence and Cost of Alcoholism 629
  - Anxiety and Alcoholism 630
  - Alcohol-Related Fatalities 630
Adverse Systemic Effects of Alcoholism 630
  Effects on the Gastrointestinal System 631
  Effects on the Cardiovascular System 632
  Effects on Reproductive Functions 633
  Effects on the CNS 633
  Gender and Alcohol-Related Pathology 634
Neuromolecular Effects of Alcohol 634
  Alcohol–GABA Interactions 637
  Interactions between Alcohol and Other Neurotransmitters 637
Alcohol Tolerance 643
  Acute Tolerance 643
  Chronic Tolerance 645
Alcohol Interactions with Other Drugs 647
  Acute Alcohol–Drug Interactions 648
  Chronic Alcohol–Drug Interactions 648
  Acute Alcohol–Chronic Drug Interactions 648
Alcohol Withdrawal Syndrome 649
Alcohol Abuse and Alcoholism 650
  Models of Alcoholism 650
  Genetic and Environmental Factors in Alcoholism 651
  Is There a Gene for Alcoholism? 653
  Serotonin, Personality Disorders, and Alcohol Abuse 654
  Gender-Specific Drinking Styles 655
Treatment of Alcoholism 656
  Pharmacotherapy for Alcoholism 656
  Nondrug Approaches to the Treatment of Alcoholism 660
  The Effectiveness of Different Treatment Approaches 661
  The Relapse Prevention Approach 662
Fetal Alcohol Syndrome 663
  Frequency and Antecedents of Fetal Alcohol Syndrome 663
  Alcohol Effects on Fetal Development and Postnatal Behavior 663
  Factors Contributing to FAS 666
  Is There a No-Risk Level of Alcohol Use for Pregnant Women? 668
Summary 669

16. Sedative–Hypnotic and Anxiolytic Drugs 673
Part I The History and the Study of Anxiolytic Drugs 673
  Early Sedative–Hypnotic Drugs 673
  Bromides 673
  Belladonna Alkaloids 674
  Narcotic Analgesics (Opiates) 674
  The Development of Modern Anxiolytics 674
  Experimental Methods for the Assessment of Anxiolytic Drugs 674
  Classical Paradigms for Assessing Anxiolytic Effects 675
  Alternative Testing Procedures 677
Part I Summary 678
Part II The Barbiturates 678
  The History of Barbiturates 678
  Barbiturate Pharmacology 680
  Synaptic Effects of Barbiturates 680
  The Site of Barbiturate Action 680
  The Role of GABA in Barbiturate Effects 681
  Barbiturate Effects on the GABA \textsubscript{A} Receptor Complex 681
  Barbiturate Effects on the CNS 682
  Barbiturate Abuse and Toxicology 682
  Barbiturate Abuse 682
  Assessment Methods 682
  Barbiturate Toxicity 683
  Parameters of Barbiturate Dependence 683
  Barbiturate Tolerance 683
  Barbiturate Tolerance and Dependence in Animals 683
  Barbiturate Tolerance and Dependence in Humans 685
  Diagnosis and Treatment of Barbiturate Abuse 685
Part II Summary 685
Part III The Benzodiazepines and Other Nonbarbiturate Anxiolytics 686
  Early Nonbarbiturate Anxiolytics 686
  The Development of the Benzodiazepines 686
  Molecular Studies 688
    Chemistry of the Benzodiazepines 688
    Benzodiazepine Binding Characteristics 688
  Mechanisms of Action 689
    Neurophysiological Studies 689
    Biochemical Studies: The Interaction with GABA 689
    Pharmacological Studies 689
  Benzodiazepine Receptors and Their Ligands 691
    The \(-\text{Carbolines and Other BDZ Receptor Ligands} 691
    Endogenous Benzodiazepines in Mammalian Brains 692
    Anxiety and the Inverse Agonists 694
    What Is the Natural Role of BDZ Receptors? 694
  The \(-\text{Carbolines: Pharmacological Assessment 695
    Binding Potency 695
    Comparative Anxiolysis 696
    Drug Discrimination Tests 696
    Corticosterone Reactions 697
  Effects of Stress on GABA and BDZ Receptors 697
  Stress-Induced Proconvulsant and Proconvulsant Effects 698
  Benzodiazepine Effects on Transmitter Systems 698
    The Limited Role of GABA 698
    Benzodiazepine–Catecholamine Interactions 699
    Benzodiazepine–Acetylcholine Interactions 700
  Benzodiazepine–Serotonin Interactions 700
    Effects of Serotonin Agonists and Antagonists in the Geller–Seifter Paradigm 701
    Alternative Testing Procedures 702
  Serotonergic Drugs and Anxiety 703
    5-HT\textsubscript{1A} Receptor Ligands 704
    5-HT\textsubscript{3} Receptor Ligands 706
Part III Summary 708
Part IV Benzodiazepine Therapeutics 709
  Pharmacological Considerations 709
    The Efficacy of Benzodiazepines 709
    The Safety of Benzodiazepines 710
    Tolerance and Dependence 710
    Alcohol–Benzodiazepine Interactions 713
  Benzodiazepine Treatment of the Anxiety Disorders 713
Parameters of Anxiety Disorders 713
Panic Disorder 713
Generalized Anxiety Disorder 715
Paradoxical Benzodiazepine Effects 715
Abuse Liability of Benzodiazepines 716
The Parameters of BDZ Abuse 717
Serotonergic Anxiolytics 717
Buspirone Characterization and Therapeutics 717
Buspirone Side Effects and Overdoses 718
Buspirone versus BDZ Treatment 718
The Treatment of Insomnia 718
The Nature of Sleep 719
The Nature of Insomnia 720
The Assessment and Diagnosis of Insomnia 722
Pharmacological Treatment of Insomnia 722
Adverse Effects of Triazolam 726
BDZ Hypnotics: Management of Treatment 728
Part IV Summary 729
17. Mind-Altering Drugs 731
Part I Marijuana and the Cannabinoids 731
The History of Cannabis Use 732
Cannabinoid Pharmacology: Chemical Structures, Pharmacokinetics, and Metabolism 732
Cannabinoid Structure and Activity 732
Cannabinoid Absorption, Metabolism, and Clearance 734
Acute Behavioral and Physiological Effects in Humans 734
Cannabis Intoxication 735
Learning, Memory, and Other Cognitive Functions 736
Psychomotor Performance 736
Acute Physiological Effects of Cannabis 737
Therapeutic Uses of Cannabinoids 737
Acute Behavioral Effects in Animals 738
Unconditioned Behavior 738
Operant Behavior 738
Discriminative Stimulus Properties of THC 738
Reinforcing Effects of Cannabinoids 739
Cannabis Abuse and the Effects of Chronic Cannabis Exposure 739
Initiation and Progression of Cannabis Use 739
Tolerance 739
Dependence and Withdrawal 741
Psychological and Neurological Effects of Long-Term Exposure 742
Physiological Effects of Long-Term Exposure 743
Mechanisms of Action of Cannabinoids 744
Cannabinoid Receptors 744
Electrophysiological Effects 747
Effects on Neurotransmitter Systems 748
Part I Summary 749
Part II Phencyclidine 750
Basic Pharmacology of PCP 750
Acute Behavioral Effects of PCP in Humans 751
Results From Controlled Studies 751
PCP Intoxication in Drug Abusers 752
PCP and Psychopathology 752
Acute Behavioral Effects of PCP in Animals 753
Excitatory and Depressant Effects 753
Effects on Learning and Memory 753
Discriminative Stimulus Properties of PCP 754
Reinforcing Effects of PCP 755
PCP Abuse and the Effects of Chronic PCP Exposure 756
Why Is PCP Abused? 756
Tolerance and Dependence 757
Psychological and Neurological Effects of Chronic PCP Use 758
Mechanisms of PCP Action 758
The PCP Receptor 758
Other Neurochemical Actions of PCP 760
Role of the NMDA Receptor and Other Neurochemical Systems in the Behavioral Effects of PCP 762
Part II Summary 764
Part III LSD 765
Synthesis and Characteristic Effects of LSD 765
Basic Pharmacology of LSD 766
Psychological and Physiological Effects 766
Does LSD Cause Hallucinations? 767
LSD and Schizophrenia 767
Psychedelic Properties of LSD 767
LSD–5-HT Interactions 770
Receptor Binding of LSD 770
Single-Cell Studies 771
LSD-Induced Raphe Activity and Behavior 772
The Role of the 5-HT Receptor in Hallucinogenesis 773
LSD and 5-HT in Review 775
Isoergine (Lysergic Acid Amide) 775
Therapeutic Use of Hallucinogens 776
Assessment of LSD Therapies 777
Misuse and Abuse of LSD 778
Part III Summary 779
CLINICAL APPLICATIONS 781
18. Schizophrenia 783
Diagnosis, Etiology, and Pathology 783
Symptoms 784
Diagnosis 784
Prognosis 787
Etiology 787
Neuropathology 791
Models of Schizophrenia 795
Pharmacotherapy: Phenothiazines and Butyrophenones 795
Structure–Activity Relationships of Neuroleptics 795
Effectiveness 797
Side Effects of Neuroleptics 798
Parkinsonism 798
Tardive Dyskinesias 798
Other Effects of Neuroleptics 800
Tolerance and Dependence 801
Effects on Conditioned Avoidance in Animals 801
Mechanisms of Neuroleptic Action 802
Atypical Neuroleptics 807
Neurochemical Hypotheses of Schizophrenia 811
