Sunderland, Massachusetts U.S.A.

Brief Contents

- 1** *An Introduction to fMRI* 1
- 2** *MRI Scanners* 31
- 3** *Basic Principles of MR Signal Generation* 57
- 4** *Basic Principles of MR Image Formation* 89
- 5** *MR Contrast Mechanisms
and Pulse Sequences* 121
- 6** *From Neuronal to Hemodynamic Activity* 159
- 7** *BOLD fMRI: Origins and Properties* 193
- 8** *Signal, Noise, and Preprocessing
of fMRI Data* 243
- 9** *Experimental Design* 293
- 10** *Statistical Analysis: Basic Analyses* 331
- 11** *Statistical Analysis II: Advanced Approaches* 377
- 12** *Advanced fMRI Methods* 419
- 13** *Combining fMRI with other Techniques* 443
- 14** *The Future of fMRI: Practical
and Ethical Issues* 485

Contents

Preface xiii

1

An Introduction to fMRI 1

What Is fMRI? 3

Measurement versus manipulation techniques 4

BOX 1.1 WHAT IS fMRI USED FOR? 6

Key concept: contrast 9

Key concept: resolution 11

History of fMRI 15

Early studies of magnetic resonance 15

NMR in bulk matter: Bloch and Purcell 17

The first MR images 18

Growth of MRI 21

BOX 1.2 THE NOBEL CONTROVERSY:
SCANNERS OR IMAGES? 22

Organization of the Textbook 24

Physical bases of fMRI 25

Principles of BOLD fMRI 25

Design and analysis of fMRI experiments 26

Applications and future directions 27

Summary 28

Suggested Reading 28

Chapter References 29

2

MRI Scanners 31

How MRI Scanners Work 31

Static magnetic field 32

Radiofrequency coils 35

Gradient coils 38

Shimming coils 41

Computer hardware and software 41

Experimental control system 43

Physiological monitoring equipment 43

MRI Safety 44

Effects of static magnetic fields on human physiology 44

BOX 2.1 OUTLINE OF AN fMRI
EXPERIMENT 45

Translation and torsion 49

Gradient magnetic field effects 50

Radiofrequency field effects 52

Claustrophobia 53

Acoustic noise 54

Summary 54

Suggested Reading 55

Chapter References 55

3 Basic Principles of MR Signal Generation 57

CONCEPTUAL PATH 57

- Nuclear Spins 59
- Spins in an External Magnetic Field 60
- Magnetization of a Spin System 62
- Excitation of a Spin System and Signal Reception 64
- Relaxation Mechanisms of the MR Signal 65
- Conceptual Summary of MR Signal Generation 67

QUANTITATIVE PATH 68

- Common Terms and Notations 68
- Nuclear Spins 69
- Magnetic Moment 69
- Angular Momentum 70
- Spins in an External Magnetic Field 71
 - Spin precession 71
- Energy Difference between Parallel and Antiparallel States 74
- Magnetization of a Spin System 75
- Excitation of a Spin System and Signal Reception 77
 - Spin excitation 78
 - BOX 3.1 A QUANTITATIVE CONSIDERATION OF THE ROTATING REFERENCE FRAME 80
 - Signal reception 83
- Relaxation Mechanisms of a Spin System 85
- The Bloch Equation for MR signal generation 87
- Summary 87
- Suggested Reading 88

4 Basic Principles of MR Image Formation 89

CONCEPTUAL PATH 90

- Slice Selection 91
- Frequency Encoding 93
- Phase Encoding 95
- Conceptual Path: Summary of Image Formation 96

QUANTITATIVE PATH 97

- Analysis of the MR Signal 97
 - BOX 4.1 AN EXAMPLE OF SPATIAL ENCODING 98
 - Longitudinal magnetization (M_z) 101
 - Solution for transverse magnetization (M_{xy}) 102
 - The MR signal equation 105
- Slice Selection, Spatial Encoding, and Image Reconstruction 106
 - Slice selection 106
 - Two-dimensional spatial encoding (frequency and phase encoding) 109
 - Relationship between image space and k -space 113
 - Converting from k -space to image space 114
- 3-D Imaging 117
- Potential Problems in Image Formation 117
- Summary 120
- Suggested Reading 120

5 MR Contrast Mechanisms and Pulse Sequences 121

Static Contrasts and Related Pulse Sequences 122

- Proton-density contrast 123
- T_1 contrast 126
- T_2 contrast 129
- T_2^* contrast 131
- Chemical contrast 132
- Macromolecular contrast 133

Motion Contrasts 135

- MR angiography 135
- Diffusion-weighted contrast 138
- BOX 5.1 DIFFUSION TENSOR IMAGING 140
- Perfusion-weighted contrast 142

Fast Imaging Sequences for fMRI 147

- Echo-planar imaging 147
- Spiral imaging 148
- Signal recovery and distortion correction
for EPI and spiral images 152

Summary 154**Suggested Reading 156****Chapter References 157**

6 From Neuronal to Hemodynamic Activity 159

Neuronal Activity 160

- Ion channels in neurons 162
- Neurotransmitters and action potentials 163

Cerebral Metabolism: Neuronal Energy Consumption 165

- Adenosine triphosphate (ATP) 166

The Vascular System of the Brain 168

- Arteries, capillaries, and veins 170
- Arterial and venous anatomy of the human
brain 171
- Microcirculation 172

Blood Flow 174

- Control of blood flow 175
 - BOX 6.1 NEUROVASCULAR COUPLING AND
CONTROL OF BLOOD FLOW 176
- Effects of increased blood flow on
capillaries 179
 - BOX 6.2 PRIMER ON NEUROANATOMY 182

Summary 190**Suggested Reading 190****Chapter References 191**

7 BOLD fMRI: Origins and Properties 193

History of BOLD fMRI 193

- Discovery of BOLD contrast 194
- The coupling of metabolism and
blood flow 196
 - BOX 7.1 PET IMAGING 197

The Growth of BOLD fMRI 201

- Contributing factors 201
- Early fMRI studies 203
 - BOX 7.2 FUNCTIONAL STUDIES USING
CONTRAST AGENTS 204

The BOLD Hemodynamic Response 208

- BOX 7.3 NEURONAL ACTIVITY AND BOLD
fMRI 209
- The initial dip 211

Spatial Resolution 214

- Spatial specificity in the vascular system 216
- What spatial resolution is needed? 219

Temporal Resolution of fMRI 220

- What temporal resolution is needed? 223
- Effects of stimulus duration and timing 225

Linearity of the Hemodynamic Response 229

- Properties of a linear system 230
- Evidence for rough linearity 231
- Challenges to linearity 233
 - fMRI-adaptation 235

Summary 237**Suggested Reading 238****Chapter References 239**

8 Signal, Noise, and Preprocessing of fMRI Data 243

Understanding Signal and Noise 245

- Signal and noise defined 245
 - BOX 8.1 TERMINOLOGY OF fMRI 246
- Functional SNR 248

Effects of Field Strength on fMRI Data 250

- Field strength and raw SNR 251
- Field strength and spatial properties of
activation 252
- Challenges of high-field fMRI 254

Sources of Noise in fMRI 255

- Thermal noise 256
- System noise 258
- Motion and physiological noise 259
- Non-task-related neural variability 262
- Behavioral and cognitive variability in task performance 262
- BOX 8.2 VARIABILITY IN THE HEMODYNAMIC RESPONSE OVER SUBJECTS AND SESSIONS 264

Preprocessing 267

- Quality assurance 267
- Slice acquisition time correction 269
- Head motion: an overview 271
- Prevention of head motion 274
- Correction of head motion 276
- Distortion correction 277

Functional–Structural Coregistration and Normalization 280

- Functional–structural coregistration 280
- Spatial normalization 281

Temporal and Spatial Filtering 284

- Temporal filtering 285
- Spatial filtering 287

Summary 289**Suggested Reading 289****Chapter References 290**

9 *Experimental Design* 293

Basic Principles of Experimental Design 294**Setting Up a Good Research Hypothesis 296**

- Are fMRI data correlational? 298
- Confounding factors 299

Good Practices in fMRI Experimental Design 302**Blocked Designs 303**

- Setting up a blocked design 304
- BOX 9.1 BASELINE ACTIVATION IN fMRI 306
- Advantages and disadvantages of blocked designs 310

Event-Related Designs 313

- Principles of event-related fMRI 316
- Advantages of event-related designs 319
- BOX 9.2 EFFICIENT fMRI EXPERIMENTAL DESIGN 320

Mixed Designs 325**Summary 327****Suggested Reading 327****Chapter References 328**

10 *Statistical Analysis: Basic Analyses* 331

Basic Statistical Tests 333

- Contrasting experimental conditions: the *t*-test 334
- Comparing experimental and predicted responses: correlation analyses 338
- BOX 10.1 IDENTIFYING TASK-RELATED PERIODICITY: FOURIER ANALYSES 341

Regression Analyses 343

- The general linear model: an overview 343
- Constructing a design matrix: regressors of interest 345
- Constructing a design matrix: nuisance regressors 349
- Modeling neuronal activity 351
- Modeling hemodynamic convolution 352
- Contrasts 354
- Assumptions of the general linear model 356

Corrections for Multiple Comparisons 357

- Calculating the significance threshold 358
- Thresholding based on clusters of activation 360
- Estimating the number of independent tests 361

Region-of-Interest Analyses 362**Intersubject Analyses 365**

- Group and parametric effects 367

Displaying Statistical Results 369**Summary 373****Suggested Reading 373****Chapter References 374**

11 *Statistical Analysis II: Advanced Approaches* 377

Data Exploration Approaches 378

- Principal components analysis (PCA) 378
- Independent components analysis (ICA) 380
- Partial least squares (PLS) 382

Between-Subjects Correlations: Hyperscanning 384

Functional Connectivity Approaches 386

- From coactivation to connectivity: a conceptual overview 386
 - BOX 11.1 INTERSUBJECT CORRELATIONS IN FREE VIEWING 387
- Resting-state connectivity 391
- Psychophysiological interactions 393
- Inferring causality from fMRI data 394
- Combining fMRI and DTI 399

Prediction Approaches 401

- Predicting variation among individuals 402
 - BOX 11.2 REAL-TIME fMRI 403
- Predicting variation in behavior 407
- Pattern classification using machine learning algorithms 408
- Capabilities and challenges of fMRI pattern classification 412

Summary 415

Suggested Reading 416

Chapter References 416

12 *Advanced fMRI Methods* 419

Improved Spatial Resolution 420

- MR microscopy 420
- Parallel imaging 423
- Parallel imaging with massive coil arrays 425

Improved Temporal Resolution 426

- Multiple-channel acquisition 427
- Partial k -space imaging 427
- Efficient k -space trajectories 430
- Improved experimental designs 432

Improved Functional Resolution through New Contrast Mechanisms 433

- Temperature-dependent contrast 434
- pH-dependent contrast 435
- Ion-gated contrast 437
- Neuronal magnetic field contrast 438
- Lorentz effect contrast 439

Summary 440

Suggested Reading 441

Chapter References 441

13 *Combining fMRI with other Techniques* 443

Cognitive Neuroscience 443

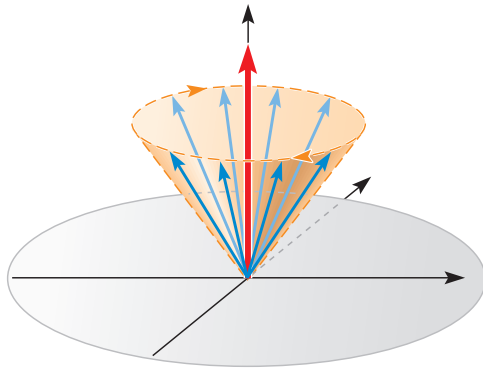

- Strategies for research in cognitive neuroscience 445

Manipulating Brain Function 446

- Direct cortical stimulation 446
- Functional consequences of direct cortical stimulation 448
- Transcranial magnetic stimulation (TMS) 450
- Brain lesions 452
- Combined lesion and fMRI studies 454
- Probabilistic brain atlases 455
- Brain imaging and genomics 457

Measuring Brain Function 458

- Single-unit recording 458
 - BOX 13.1 ELECTROGENESIS 459
- Limitations of single-unit recording 462
- Properties of electrical field potentials 464
- Localizing the neural generators of field potentials 465

Intracranially recorded field potentials 466
 BOX 13.2 LOCALIZATION OF FUNCTION USING
 FIELD POTENTIAL RECORDINGS 468
Scalp-recorded field potentials 470
 BOX 13.3 COMBINING fMRI AND EEG/ERP
 TECHNIQUES 472
Magnetoencephalography 474
Using fMRI with non-human primates 476
Summary 480
Suggested Reading 480
Chapter References 481

14 The Future of fMRI: Practical and Ethical Issues 485

Introduction 485
Interpreting and Presenting fMRI Data 486
 Coverage of fMRI research in the popular media 487
 Core principles for presenting fMRI research 489
 BOX 14.1 REVERSE INFERENCE 490
Conducting fMRI Research 494
 Proposing and approving fMRI research 495
 Ensuring the confidentiality of fMRI data 497
 BOX 14.2 INCIDENTAL FINDINGS IN fMRI RESEARCH 498
 Safe conduct of fMRI studies 502
 Pregnancy testing in fMRI research 504
Applying fMRI to New and Controversial Topics 505
 Reading minds 506
 Identifying traits 509
The Future of fMRI Research (and your role in it) 511
Summary 513
Suggested Reading 515
Chapter References 515

Glossary 517
Index 533
