Contents

CHAPTER ONE
Sexuality: Pathways to Understanding 3

Why Study Human Sexuality? 3
Sex Research Has Developed from Converging Strands 4
Observational studies began with Aristotle 4
Sexual ethics have religious roots 5
Sex researchers emerged in the late nineteenth century 6
BOX 1.1 Freud and Hirschfeld: Contrasting Theories on Sexual Orientation 8
Psychological anthropologists investigated non-Western perspectives on sex 8
Feminists campaigned for sexual reforms 10
Biomedical research had a practical impact on people's sex lives 11

Sexuality Can Be Studied with a Wide Variety of Methods 12
Biomedical research focuses on the underlying mechanisms of sex 12
Psychologists take diverse approaches to sexuality 13

BOX 1.2 Meet My Dads 15
Sociologists focus on the connection between sex and society 16
Sociologists may take an ethnographic approach 18
The economic approach weighs costs and benefits 18
Sex research is becoming a discipline in its own right 19

Religions Offer Diverse Teachings on Sexuality 19
BOX 1.3 Sexual Health for the Millennium 20
Catholicism teaches conservative attitudes toward sexuality 20
Protestant teachings are more flexible 21
Judaism spans a spectrum 22
Global religions are embedded in diverse societies 22

Sex Education Faces Significant Obstacles 23
CHAPTER TWO
Sex and Evolution  29

Diverse Methods of Reproduction Have Evolved  29
Rival Theories Offer Explanations for Sexual Reproduction  31
BOX 2.1  The Cellular Basis of Reproduction  32
Sexual reproduction may limit harmful mutations  33
Sexual reproduction may generate beneficial gene combinations  34
Future research may solve the puzzle  35
Why Are There Two Sexes?  35
BOX 2.2  The Paradox of Sexless Species  36
Hermaphrodites combine male and female reproductive functions  37
Can there be more than two sexes?  38
Why are there equal numbers of males and females?  38
Evolution Has Led to Diverse Methods of Sex Determination  39
Sex may be determined by chromosomes  39
Sex may be determined by temperature  40
Sexual Selection Produces Anatomical and Behavioral Differences between Males and Females  41
Males and females follow different reproductive strategies  41
Females and males are exposed to different reproductive risks  42
Males often compete for access to females  42

Females often choose among males  43
Sometimes males make significant investments in reproduction  45
BOX 2.3  When Males Get Pregnant  46
If males invest, sexual selection may work differently  46
Diverse Relationship Styles Have Evolved  48
Social and sexual arrangements are not necessarily the same  48
Male promiscuity offers obvious evolutionary benefits  49
Why are females promiscuous?  49
Female promiscuity leads to adaptive responses by males  50
Males may copulate with females by force  51
Sometimes, Helping Relatives Reproduce Is a Good Strategy  52
Kin selection explains some altruistic animal behavior  53
Sex Has Acquired Other Functions beyond Reproduction  53
BOX 2.4  Does Sexual Morality Have an Evolutionary Basis? The Case of Incest  54
Female and male bonobos engage in non-reproductive sex  55
Bonobos use sex for conflict resolution and alliance formation  56

CHAPTER THREE
Women’s Bodies  59

A Woman’s Vulva Includes Her Mons, Labia, Vaginal Opening, and Clitoris  59
BOX 3.1  Genital Cosmetic Surgery  62
There is more to the clitoris than meets the eye  62
BOX 3.2  Female Circumcision  64
The appearance of the vaginal opening is variable  65
The Vagina Is the Outermost Portion of the Female Reproductive Tract  67
The G-spot is a controversial erogenous zone  69
The Anus Can Also Be a Sex Organ  69
The Uterus Serves a Double Duty  70
Cancer can affect the cervix or the endometrium  70
BOX 3.3  Genital Self-Examination  71
Other uterine conditions include fibroids, endometriosis, abnormal bleeding, and prolapse  73
Should hysterectomy be so common?  74
The Oviducts Are the Site of Fertilization  74
BOX 3.4  Hysteria  75
The Ovaries Produce Ova and Sex Hormones  76
The Breasts Have Both Erotic and Reproductive Significance  77

© Sinauer Associates, Inc. This material cannot be copied, reproduced, manufactured or disseminated in any form without express written permission from the publisher.
CHAPTER FOUR
Men's Bodies 87

The Male External Genitalia Are the Penis and Scrotum 87
The penis combines erotic, reproductive, and excretory functions 88
BOX 4.1 Male Circumcision 90
BOX 4.2 How Big Should a Penis Be? 93
The scrotum regulates the temperature of the testicles 94
The Testes Produce Sperm and Sex Hormones 95
BOX 4.3 Disorders of the Testicles 97
Other glands contribute their secretions to the semen 98
What is semen? 99

CHAPTER FIVE
Sex Hormones and the Menstrual Cycle 119

Sex Steroids Consist of Three Groups 119
BOX 5.1 Testicles by the Ton—The Discovery of Sex Steroids 121
Testosterone is a sex hormone in both men and women 123
Estradiol is synthesized from testosterone in both sexes 124
Progesterone is a female hormone 124
Sex steroids activate specific receptor molecules 124
Proteins and Peptide Hormones Are Gene Products 125
Oxytocin is secreted by neuroendocrine cells of the hypothalamus 125
GnRH stimulates the release of pituitary sex hormones 125
The pituitary gonadotropins are follicle-stimulating hormone (FSH) and luteinizing hormone (LH) 126

Other pituitary hormones include prolactin and growth hormone 127
Protein hormones are secreted by other tissues 128
Prostaglandins and Monoamines Also Influence Sexual Functions 128
A Brain—Pituitary—Testis Feedback Loop Controls Testicular Function 128
The regulation of testosterone levels and spermatogenesis is coupled 128
Testosterone and inhibin exert negative feedback on gonadotropin release 129
Testosterone has multiple functions in men 129
BOX 5.2 Steroids and Sports 131
Estradiol has wide-ranging effects in men’s bodies 132
Menstruation Has Biological and Social Aspects 132
BOX 5.3 Attitudes toward Menstruation 133
CHAPTER SIX
Sexual Development

Humans Pass through Distinct Stages of Development

The Menstrual Cycle Involves the Ovaries, Brain, Pituitary, and Uterus

Fertilization Is the Fusion of One Sperm with One Ovum

BOX 5.4 Menstrual Synchrony: Reality or Myth?

The menstrual phase is triggered by a drop in progesterone levels

The follicular phase is marked by the maturation of ovarian follicles

During the luteal phase the uterus is prepared for pregnancy

Genetic Sex Is Determined at Fertilization

Sex is usually determined by the presence or absence of the Y-linked gene SRY

SRY and other genes direct the development of the gonads

BOX 6.1 Atypical Development: Chromosomal Anomalies

Sexual Development Involves Growth or Breakdown of Precursor Structures

Primordial germ cells migrate into the developing gonads

BOX 6.2 Atypical Development: Gonadal Intersexuality

Male and female reproductive tracts develop from different precursors

BOX 6.3 Atypical Development: Androgen Insensitivity Syndrome

Male and female external genitalia develop from the same precursors

Sex steroids affect systems in women besides the reproductive tract

The menstrual cycle influences sexuality

Menstrual Problems Are Common but Treatable

Menstrual pain might or might not reflect underlying pelvic disease

Premenstrual syndrome has physical and psychological aspects

Menstruation stops during pregnancy—and for many other reasons

Sex Hormone-Related Compounds Exist in the Environment

BOX 5.5 Sex Hormones in the Environment

BOX 6.4 Atypical Development: Congenital Adrenal Hyperplasia

The gonads descend during development

BOX 6.5 Atypical Development: 5α-Reductase Deficiency

BOX 6.6 Atypical Development: Hypospadias and Micropenis

Hormones Influence the Sexual Differentiation of the Central Nervous System

The CNS contains sexually dimorphic structures

Sexual dimorphism arises as a consequence of differing hormonal levels during a sensitive period

Early Hormonal Exposure Influences Later Sexual Behavior

Experiments on rodents show activational and organizational effects of androgens

Primates have multiple sensitive periods

Other Y-Linked Genes Besides SRY Influence Development

External Factors Influence Prenatal Sexual Development

Biological and social factors interact postnatally

Puberty Marks Sexual Maturation

The pubertal growth spurt occurs earlier in girls than in boys

Puberty is marked by visible and invisible changes in the body

### CHAPTER SEVEN
#### Gender
- **Gender Is a Central Aspect of Personhood** 191
- **Gender Research Has Emerged from a History of Sexism** 192
- **Gender Identity May Be Discordant with Anatomical Sex** 193
- **Men and Women Differ in a Variety of Cognitive and Personality Traits** 193
  - Differences in sexuality include attitudes toward casual sex, jealousy, and frequency of masturbation 194
  - Many gender differences arise early in life 196
- **Biological Factors Influence Gender** 197
  - Evolutionary forces act differently on males and females 197
  - Experiments demonstrate a role for sex hormones 199
  - **BOX 7.1 “Eggs at Twelve”** 201
- **Life Experiences Influence Gender** 202
- **Gender is molded by socialization** 202
- **Cognitive developmental models focus on thought processes** 205
  - **BOX 7.2 The Boy Who Was Raised as a Girl** 206
- **Gender Development Involves Complex Interactions** 208
- **Transgender People Cross Society’s Deepest Divide** 208
  - Transsexuals are of more than one kind 209
  - **BOX 7.3 Transgenders in Cross-Cultural Perspective** 210
  - Changing sex is a multistage process 212
  - **BOX 7.4 How Should We Treat Gender-Dysphoric Children?** 214
  - Some transgenders do not want surgery 215
  - Transgenders and transexuals struggle for awareness and acceptance 215

### CHAPTER EIGHT
#### Attraction, Arousal, and Response
- **Sexual Attraction: It Takes Two** 219
  - Beauty is not entirely in the eye of the beholder 220
  - Culture influences the attractiveness of bodies 222
  - **BOX 8.1 Beauty and Culture** 224
  - Attractiveness involves senses besides vision 226
  - Behavior and personality influence sexual attractiveness 227
  - Familiarity may increase or decrease attraction 228
  - Perceived attractiveness varies around the menstrual cycle 230
  - Some people do not experience sexual attraction 230
- **Sexual Arousal Has Multiple Roots** 232
  - Fantasy is a common mode of sexual arousal 232
  - Rape fantasies may be aversive or erotic 234
  - Arousal occurs in response to a partner 235
  - Hormones influence sexual arousability 236
  - Conditioning may influence arousal 237
  - **BOX 8.2 Aphrodisiacs and Drugs** 238
- **Sexual Arousal Follows a Response Cycle** 239
  - In the excitement phase, genital responses begin 240
  - In the plateau phase, arousal is maintained 241
  - Orgasm is the climax of sexual arousal 242

© Sinauer Associates, Inc. This material cannot be copied, reproduced, manufactured or disseminated in any form without express written permission from the publisher.
BOX 8.3 Female Ejaculation 243
Brain imaging suggests where orgasm may be experienced 244
In the resolution phase, arousal subsides 245
The phases may be linked in different ways 245
Some people experience multiple orgasms 246

Men experience a refractory period 246

BOX 8.4 Women and Men Describe Their Orgasms 247
The Masters and Johnson cycle may be incomplete 247

CHAPTER NINE
Sexual Behavior 251

People Derive Pleasure from Diverse Sexual Behaviors 251

Masturbation Is a Very Common Form of Sexual Expression 253
Negative attitudes toward masturbation are still prevalent 253

BOX 9.1 The Dreaded M Word 254
Several demographic factors influence masturbation 255
Women use more diverse techniques of masturbation than men 256
Gay people masturbate more than heterosexuals 256
Different cultures have different attitudes toward masturbation 257

The Kiss Represents True Love—Sometimes 258

Sexual Touching Takes Many Forms 258

Oral Sex Is Increasingly Popular 259
Fellatio is oral stimulation of the penis 259
Cunnilingus is oral stimulation of the vulva 260

Most Sexual Encounters Include Coitus 261
Coitus can be performed in many different positions 261
The man-above position is the traditional favorite 262

BOX 9.2 Progress in Coitus Research 263
The women’s movement encouraged alternative positions 264

Anal Sex May Be a Part of Either Heterosexual or Male Homosexual Behavior 265

BOX 9.3 The Crime of Sodomy 266

Men and Women May Have Different Preferences for Sexual Encounters 267

Sex Toys Are Used to Enhance Sexual Pleasure 268

There are Cultural Variations in Sexual Behavior and Attitudes 270
The Kama Sutra is the classic work on how to make love 270

BOX 9.4 What is “Great Sex”? 271
The Aka emphasize the importance of frequent sex 272

BOX 9.5 Dry Sex 273

Many Disabled People Have Active Sex Lives 274
Arthritis is the number one disability affecting sex 274

BOX 9.6 On Seeing a Sex Surrogate 275
Spinal cord injuries present a major challenge to sexual expression 276
Many intellectually disabled people are competent to make sexual choices 278
CHAPTER TEN
Sexual Relationships 283

Sexual Relationships Are Motivated by Many Factors 283
Moral Judgments about Sex Depend on Its Context 283

BOX 10.1 Who May Marry? 284
Demographic factors affect sexual attitudes 285

Americans’ Attitudes Have Changed over Time 286
Attitudes in other countries differ from those in the United States 287

Casual Sex Has More Appeal to Men than to Women 288

BOX 10.2 Getting the BUG 289
Hooking up—The new norm? 290
Casual sex is more accepted in the gay male community 292
Negotiating sex involves flirting 293

Dating Relationships Are Often Short-Lived 294
First dates may follow a script 294
Same-sex dates have their own scripts 295
Dating relationships may evolve rapidly 296

Love Cements Many Sexual Relationships 296
There are different kinds of love 296
Romantic love may be a human universal 296

BOX 10.3 Love in Literature 297
Being in love may be the justification for marriage or sex 298
People fall in love with attractive persons who show some interest in them 298
Researchers are probing the biological basis of love 298

One theory proposes that love has three components 299

BOX 10.4 This Is Your Brain in Love 300
Unrequited Love Is Painful for Both Parties 303
Rejection in love damages self-worth 303

BOX 10.5 Love Stories 304
The rejector may experience guilt 305

Life Experiences Mold Our Sexual Relationships 305
Relationship styles are influenced by childhood attachments 306

Couples in Relationships Resemble Each Other 306
Communication Is a Key Factor in the Success of Relationships 307
Communication may be inhibited by upbringing or by the gender barrier 308
Marriage and relationship education teaches communication skills 308
How couples deal with conflict affects the stability of their relationship 309

Love, Jealousy, and Infidelity May Be Intertwined 311
Jealousy can have a positive function 311
Jealousy can become a high-stakes game 312

Extra-Pair Relationships Have Many Styles and Motivations 313
Personal and evolutionary factors influence infidelity 313

BOX 10.6 We Just Clicked 314
Extra-pair relationships are uncommon 315
CHAPTER ELEVEN
Fertility, Pregnancy, and Childbirth

Pregnancy and Childbirth Raise Major Health Concerns  319
Pregnancy Is Confirmed by Hormonal Tests  320
The Likelihood of Pregnancy Can Be Maximized by Tracking Ovulation  321
Infertility Can Result from a Problem in the Woman or in the Man  322
A variety of factors can reduce sperm counts  322
In vitro fertilization can circumvent many sperm problems  322
BOX 11.1 Are Sperm Counts Declining?  323
Sperm can be donated  325
Abnormalities of the female reproductive tract may reduce fertility  326
Failure to ovulate can be dealt with by drugs or by oocyte donation  326
Surrogate mothers bear a child for someone else  326
BOX 11.2 Designer Gametes  327
Adoption is limited by the supply of healthy infants  328
Fertility declines with age  328
Many Embryos Do Not Survive  329
Rh factor incompatibility can threaten second pregnancies  330
Ectopic pregnancy can endanger the mother’s life  330
Pregnancy Is Conventionally Divided into Three Trimesters  331
The fetus secretes sex hormones to sustain pregnancy  331
BOX 11.3 Myths of Pregnancy  332
Women may experience troublesome symptoms during early pregnancy  333
Prenatal care provides health screening, education, and support  333
Adequate nutrition is vital to a successful pregnancy  334
Tobacco, alcohol, drugs, and radiation can harm the fetus  335
The Second Trimester Is the Easiest  336
Tests can detect fetal abnormalities  337
BOX 11.4 Choosing Children’s Sex  338
Sex during pregnancy is healthy  339
Moderate exercise during pregnancy is beneficial  340
The Third Trimester Is a Time of Preparation  340
A hospital is the best location for childbirth if complications are foreseen  341
Childbirth classes prepare parents for birth  342
The fetus also makes preparations for birth  343
Labor Has Three Stages  343
Animal studies suggest that the fetus issues the signal for parturition  343
The first stage of labor is marked by uterine contractions and cervical dilation  344
The second stage is the delivery of the baby  345
The newborn child adapts quickly  346
The third stage is the expulsion of the placenta  347
Premature and delayed births are hazardous  347
BOX 11.5 Cesarean Section  348
The Period after Birth Places Many Demands on Parents  349
Postpartum depression may be accompanied by disordered thinking  349
Childbirth and parenthood affect sexuality  350
Breast-Feeding Is the Preferred Method of Nourishing the Infant  351
Lactation is orchestrated by hormones  351
The content of breast milk changes over time  351
Infant formula is an alternative to breast milk  352
Breast-feeding has many advantages and some drawbacks  352
Biological Mechanisms May Contribute to Maternal Behavior  353

© Sinauer Associates, Inc. This material cannot be copied, reproduced, manufactured or disseminated in any form without express written permission from the publisher.
CHAPTER TWELVE

Contraception and Abortion 357

Birth Control Has a Long History 357
Feminists led the campaign to legalize contraception 358
Contraception has not yet solved the problem of unwanted births 358

BOX 12.1 Margaret Sanger and the Birth Control Movement 359
Different users have different contraceptive needs 360

Physical Methods Block Sperm Transport 361
Male condoms are reliable when properly used 361
Female condoms are relatively intrusive 364
Diaphragms and cervical caps are inconvenient but have few side effects 365
Spermicides are not very reliable when used alone 366
Intrauterine devices require little attention 367

Hormone-Based Methods Are Easy to Use 369
Combination pills offer health benefits 369
Continuous use of combination pills eliminates menstrual periods 371
Progestin-only pills have fewer side effects 372

Hormones Can Be Administered by Non-Oral Routes 373
Depo-Provera lasts three months 373
Transdermal patches last a week 374
Vaginal rings last three weeks 375
Implants are extremely reliable 376

Behavioral Methods Can Be Demanding 376
In fertility awareness methods, couples avoid coitus during the fertile window 377

The withdrawal method is simple but challenging 379
Noncoital sex can be used as a means of avoiding pregnancy 379

There Are Contraceptive Options after Unprotected Coitus 380

Sterilization Is Highly Reliable 381
Vasectomy is a brief outpatient procedure 382
Tubal sterilization is more invasive and expensive 383

Disabled Persons Have Special Contraceptive Needs 385

New Contraceptive Methods Are under Development 385

BOX 12.2 Abortion in the United States: Some Key Statistics 386
Several Safe Abortion Procedures Are Available 386
Vacuum aspiration is the standard first-trimester surgical method 387
Dilation and evacuation is used early in the second trimester 387
Induced labor and hysterotomy are performed late in the second trimester 388
Medical abortions are two-step procedures 388

BOX 12.3 Does Abortion Traumatize Women? 390
Abortions do not cause long-lasting ill-effects 390

Americans Are Divided on Abortion, but Most Favor Restricted Availability 390
The abortion debate focuses on specific issues 392
The availability of abortion varies by location 393

Some Countries Use Birth Control to Regulate Population Growth 395

CHAPTER THIRTEEN

Sexuality across the Life Span 399

Some Forms of Childhood Sexual Expression Are Common 399
In contemporary Western culture, children are insulated from sex 400
Some children engage in solitary sexual activity 400

BOX 13.1 Talking with Children about Sex 401

Interpersonal sexual activity can occur during childhood 402
Cultures vary in their attitudes toward childhood sexuality 403

Some Children Have Sexual Contacts with Adults 403
Most adult–child contacts involve older children and are single encounters. Some kinds of adult–child sex are more harmful than others. Strategies to prevent adult–child sex are quite effective.

Preadolescence May Be Marked by an Increase in Sexual Interest

Adolescence Is a Time of Sexual Exploration

Many cultures have puberty rites. There are social influences on teen sexual behavior. Males masturbate more than females. The sexual behavior of American teens has increased and diversified.

BOX 13.2 Sex and Suggestibility

Strict gender norms may traumatize children who become gay adults.

BOX 13.3 Losing It

Noncoital sex is popular among teens.

Teen Sexuality Is Central to Identity Development

Is dating outdated? Teen pregnancy is declining but is still too common.

In Young Adulthood, Conflicting Demands Moderate Sexual Expression

Most young men and women have only a few sex partners.

Cohabitation Is an Increasingly Prevalent Lifestyle

Marriages preceded by cohabitation may be less durable. Cohabitation has diverse meanings.

Marriage Takes Diverse Forms

The formalization of sexual unions has social and personal functions.

BOX 13.4 Mormon Polygamy

Many societies have permitted polygamy. Polyamory includes a variety of nonmonogamous relationships.

The Institution of Marriage Is Evolving

Companionate marriage makes the availability of divorce a necessity.

Marriage is becoming a minority status.

Most Married Couples Are Satisfied with Their Sex Lives

Marriage makes sex more satisfying for women. The frequency of sex declines during marriage.

BOX 13.5 Contrast Effects and Marital Woes

Women’s marital satisfaction declines during middle age.

Many Factors Bring Relationships to an End

Dissimilarity between husbands and wives shortens marriages.

Marital Disruption Can Have Negative and Positive Consequences

Divorced men and women can suffer physical, psychological, and economic damage. Divorce may be the start of a new life. Most divorced people remarry. Does marriage have a future?

Menopause Marks Women’s Transition to Infertility

Menopause may be caused by depletion of oocytes. Women may experience a decline in sexual desire at menopause. Decreased hormone levels affect a woman’s physiology. Hormone therapy can reduce menopausal symptoms. Postmenopausal hormone therapy is controversial.

There are ethnic differences in the psychological experience of menopause.

Men’s Fertility Declines Gradually with Age

The Sex Lives of Old People Have Traditionally Been Ignored

Aging is accompanied by physiological changes in the sexual response. Medical conditions, drugs, and social factors can impair the sexuality of older people. Coping strategies may require flexibility. Some older people remain sexually active. Sex can be highly rewarding for old people.

BOX 13.6 Sex and Death among Welsh Cheesemakers
CHAPTER FOURTEEN
Sexual Orientation  447

There Is a Spectrum of Sexual Orientations  447
Sexual Orientation Is Not an Isolated Trait  449
BOX 14.1 Boys Will Be Girls  450
Diverse Theories Attempt to Explain Sexual Orientation  451
Freud proposed psychodynamic models  451
Sexual orientation has been attributed to socialization  451
Biological theories focus on prenatal hormones and genes  452
The Basis for Defining Homosexual People Has Changed over Time  454
Homosexuals were thought of as gender inverts  456
Gay people were later subdivided on the basis of gender characteristics  456
The Gay Community Has Struggled for Equal Rights  457
The gay rights movement began in Germany  457
BOX 14.2 Harvey Milk  459
BOX 14.3 Gay Marriage in America  460
Gay rights are a global issue  460
Growing Up Gay Presents Challenges  462
BOX 14.4 Hatred in the Hallways  463

CHAPTER FIFTEEN
Atypical Sexuality  483

Sexual Variety Is the Spice of Life  483
Most fetishisms are related to the body  484
People cross-dress for a variety of reasons  486
BOX 15.1 Rubber Fetishism and the Internet  487
BOX 15.2 Heterosexual Transvestic Fetishism  489
Some men are aroused by transgenders  490
Sadomasochism involves the infliction or receipt of pain or degradation  490
“Adult babies” reenact infancy  491
Paraphilia Is the Psychiatric Term for Problematic Sexual Desire or Behavior  492
Exhibitionists expose themselves to nonconsenting persons  494
Voyeurs are aroused by watching others  495
Frotteurism involves surreptitious physical contact  495
BOX 15.3 Frotteurism on Public Transit  496
Some Adults Are Sexually Aroused by Children  496
Pedophilia and child molestation are not synonymous  497
BOX 15.4 Should Hebephilia be a Paraphilia?  498
Attraction may be to girls, boys, or both  499
It is uncertain whether pedophiles have distinctive personalities  499
Some organizations support “minor-attracted people” 500

A Variety of Other Paraphilias Exist 501
Zoophiles are sexually fixated on animals 501
In necrophilia, nonresistance of the partner may be arousing 502
Sexual violence can be paraphilic 502
Obscene telephone calling is related to exhibitionism 503

BOX 15.5  Autoerotic Asphyxia 504

Sex Offenders Do Not Necessarily Repeat Their Offenses 505

There Are Numerous Theories of Paraphilia 505
Biological factors may predispose to paraphilia 506
Paraphilias may result from learning processes 506
Some paraphilias may represent disorders of courtship 507
Paraphilias may represent a sexual escape route 508
Paraphilias may be facilitated by other psychological traits 508
The cycle of abuse may contribute to paraphilias 508

Theories of Causation Have Suggested a Variety of Treatments 509
Conditioning is intended to change sexual desires 509
Psychotherapy is aimed at preventing repeat offenses 510
The efficacy of psychological treatments is doubtful 510
Drug treatments interact with neurotransmitters or hormones 511
Castration is a treatment of last resort 512

BOX 15.6  Castration: Barbaric Punishment or Ticket to Freedom? 513

Sexual Disorders Are Common 517

CHAPTER SIXTEEN
Sexual Disorders 517

Sexual Disorders Are Common 517
BOX 16.1  Sensate Focus 518
Men and women’s sexual problems differ 518
A multidisciplinary approach to treatment is preferred 519

BOX 16.2  Kegel Exercises 520

Premature Ejaculation Is Men’s Number One Sex Problem 520
There are different kinds of premature ejaculation 521
Drug treatment may be effective 522
Sex therapy may help men to regulate excitation 522

Delayed Ejaculation Can Be a Side Effect of Several Drugs 524

Erectile Dysfunction Has Many Causes and Treatments 525
Erectile dysfunction can have physical or psychological causes 525
Simple measures may alleviate the problem 526
Viagra and similar drugs have become the leading treatments 526
Erectile dysfunction can be treated with devices and implants 527
Psychological treatments may be useful 528

Sexual Pain Is Uncommon in Men 529

Female Sexual Arousal Disorder Involves Insufficient Genital Response 529

There Are Many Reasons for Sexual Pain in Women 530
BOX 16.3  Dyspareunia: A Case History 531
Vaginismus may make intercourse impossible 532

Difficulty in Reaching Orgasm Is Common among Women 532
Psychotherapy and directed masturbation may be helpful 533
Faked orgasms offer a questionable solution 534

Too Much Interest in Sex Can Cause Problems 535
Is excessive sexual behavior an addiction or a compulsion? 536
Compulsive sexual behavior can often be treated with SSRIs 536

Lack of Desire for Sex Is Not Necessarily a Problem 537
Hormone treatment may restore sexual desire 537
BOX 16.4  Sexual Minorities and Sexual Dysfunction 538
Estrogen or androgen treatment may improve sexual desire in women 538
Sex therapy may be helpful for low sexual desire in women 540
New views on women’s response cycles may influence treatment options 540

© Sinauer Associates, Inc. This material cannot be copied, reproduced, manufactured or disseminated in any form without express written permission from the publisher.
CHAPTER SEVENTEEN
Sexually Transmitted Diseases  545

Venereal Diseases Were Seen as Punishment for Sexual License  545
