

PRINCIPLES OF
Brain Evolution

Georg F. Striedter

University of California, Irvine

SINAUER ASSOCIATES, INC. *Publishers*
Sunderland, Massachusetts U.S.A.

Contents

Chapter 1 *Evolutionary Neuroscience: This Book's Scope and Ambition* 1

The Book's Scope and Major Themes 7

Philosophical Preamble 14

Chapter 2 *A History of Comparative Neurobiology* 19

The Birth of Comparative Neuroanatomy 20

Darwin's Time: The Owen–Huxley Debate 23

The Era of Comparative Cytoarchitectonics 29

Comparative Hodology and Histochemistry 33

The Rise of Neurocladistics 37

The Rejuvenation of Comparative Neuroembryology 45

Conclusions 49

Chapter 3 *Conservation in Vertebrate Brains* 51

A "Who's Who" of Vertebrates 53

Comparing Adult Brains 63

Adult brain regions 65

Adult cell types 70

Neuron-typical molecules 73

Comparing Embryonic Brains 77

The neuromeric model 81

Criticisms of the neuromeric model 84

Mapping Embryos onto Adults 88

Conclusions 90

***Chapter 4 Evolutionary Changes in Overall
Brain Size 93***

Changes in Relative Brain Size 98

Mechanisms of brain–body scaling 111

Functional Correlates of Relative Brain Size 116

Changes in Absolute Brain Size 126

Constraints and Compromises 131

Conclusions 133

***Chapter 5 Evolutionary Changes in Brain
Region Size 137***

Concerted versus Mosaic Evolution 140

Concerted evolution 141

Mosaic evolution 149

Toward a synthesis 157

Functional Correlates of Brain Region Size 159

The principle of proper mass 159

Absolute size and functional capacity 162

Proportional size and influence 163

Relative size and adaptation 168

Synthesis: The avian hippocampus 171

Conclusions 175

Chapter 6 Evolutionary Changes in Brain Region Structure 177

- Homology and Novelty 181
- Phylogenetic Conversion: Lamination 185
- Phylogenetic Proliferation: Segregation 197
- Phylogenetic Proliferation: Addition 202
- Conclusions 214

Chapter 7 Evolution of Neuronal Connectivity 217

- Epigenetic Population Matching and Cascades 220
- The Parcellation Hypothesis 228
- Connectional Invasion and its Consequences 236
- General Principles of Network Design 245
- Synthesis and Conclusions 251

Chapter 8 What's Special about Mammal Brains? 255

- Early Mammals and their Brains 259
 - The Phylogenetic History of Neocortex 268
 - Beyond the Neocortex 287
 - Conclusions 294
-

Chapter 9 What's Special about Human Brains? 297

Primate Behavior and Overall Brain Size 299

Evolutionary Changes in Primate Brain Organization 305

Hominin Behavior and Overall Brain Size 310

Evolutionary Changes in Hominin Brain Organization 322

Conclusions 342

Chapter 10 Reflections and Prospect 345

Explanatory Strategies in Evolutionary Neuroscience 346

Steps Toward Synthesis 352

Absolute and Relative Brain Size 355

Conclusions 360

Bibliography 363

Index 403
