Contents

Introduction 1

1 Species: Reality and Concepts 9

The Reality of Species 10

- Sexually reproducing eukaryotic taxa 12
- Groups with little or no sexual reproduction 17
- Conclusions 25

Species Concepts 25

- The biological species concept (BSC) 26
- Advantages of the BSC 38
- Problems with the BSC 39
- Other species concepts 48

Why Are There Species? 48

2 Studying Speciation 55

The Problem of Speciation 57

Identifying and Measuring Reproductive Isolation 61

- Absolute strength of isolating barriers 62
- Relative strength of isolating barriers 63
- Prezygotic versus postzygotic isolation 65

- Which isolating barriers caused speciation? 69

Comparative Studies of Isolating Barriers 72

- How fast does reproductive isolation appear? 72
- Which traits promote the evolution of reproductive isolation? 81

3 Allopatric and Parapatric Speciation 83

Allopatric Speciation 85

Vicariant speciation 86

Peripatric speciation 105

Parapatric Speciation 111

Theory 112

Experimental evidence 117

Evidence from nature 118

Conclusions 123

4 Sympatric Speciation 125

Theory 127

Disruptive sexual selection 128

Disruptive natural selection 130

Conclusions 136

Experimental Evidence 138

Evidence from Nature 141

Evidence from habitat “islands” 143

Evidence from host races and host-specific species 157

Allochronic (temporal) isolation in sympatry 166

Comparative studies of the biogeography of speciation 168

Conclusions 175

5 Ecological Isolation 179

Habitat Isolation 182

Detecting and measuring habitat isolation 184

The problem of allopatry 185

Examples of habitat isolation 186

Relative importance of habitat isolation 188

The evolution of habitat isolation 188

The genetics of habitat isolation 191

Pollinator (Floral) Isolation 193

Detecting and measuring pollinator isolation 194

Examples of pollinator isolation 195

Relative importance of pollinator isolation 197

The evolution of pollinator isolation 198

The genetics of pollinator isolation 201

Temporal (Allochronic) Isolation 202

Detecting and measuring temporal isolation 203

Examples of temporal isolation 204

Relative importance of temporal isolation 205

The evolution of temporal isolation 206

The genetics of temporal isolation 210

Conclusions 210

6 Behavioral and Nonecological Isolation 211

Mating System "Isolation" 211

Behavioral Isolation 213

Detecting and measuring behavioral isolation 213

Examples of behavioral isolation 214

Relative importance of behavioral isolation 215

The evolution of behavioral isolation 216

The genetics of behavioral isolation 223

Mechanical Isolation 227

Examples of mechanical isolation 228

Relative importance of mechanical isolation 229

The evolution of mechanical isolation 230

The genetics of mechanical isolation 231

Gametic (Postmating, Prezygotic) Isolation 232

Examples of gametic isolation 233

Relative importance of gametic isolation 238

The evolution of gametic isolation 241

Conclusions 245

7 Postzygotic Isolation 247

Extrinsic Postzygotic Isolation 249

Intrinsic Postzygotic Isolation 253

The Frequency of Various Forms of Postzygotic Isolation 255

The Evolution of Extrinsic versus Intrinsic Postzygotic Isolation 255

Genetic Modes of Intrinsic Postzygotic Isolation 256

Chromosomal speciation: theory 256

Chromosomal speciation: data 259

Genic incompatibilities 267

The evolution of genic incompatibilities: the Dobzhansky–Muller model 269

Mathematical models of genic speciation 272

Wolbachia and cytoplasmic incompatibility 276

Conclusions 280

8 The Genetics of Postzygotic Isolation 283

Haldane's Rule 284

The phenomenon 284

The causes of Haldane's rule 286

Conclusions 298

The Genetic Basis of Postzygotic Isolation 299

How many genes cause postzygotic isolation? 299

Complexity of hybrid incompatibilities 307
 Probability of hybrid incompatibilities 308
 Where are the genes causing postzygotic isolation? 308

Developmental basis of postzygotic isolation 309
 Are duplicate genes important? 312
 Which genes cause postzygotic isolation? 313

9 Polyploidy and Hybrid Speciation 321

Polyploidy 321

Classification 322
 Pathways to polyploidy 324
 Incidence 326
 Frequency of auto- versus allopolyploidy 328
 Ecology and persistence 330
 Why is polyploidy rarer in animals than in plants? 333

Recombinational Speciation 337

What is recombinational speciation? 337
 Theory 338
 The data: frequency and artificial hybrids 342
 The data: natural recombinational speciation 344
 The data meet the theory 350

10 Reinforcement 353

The Data 354

Selection experiments 355
 Evidence from nature: case studies 357
 Evidence from nature: comparative studies 362
 Reinforcement of postzygotic isolation 365

The Theory 366

Early enthusiasm 366
 Objections to reinforcement 369

The revival of reinforcement 372

Alternative Explanations 375

Publication bias 375
 Differential fusion 376
 Direct ecological effects 377
 Ecological character displacement 377
 Runaway sexual selection 378
 Sympatric speciation 378

Distinguishing the Alternatives 379

11 Selection versus Drift 383

Speciation by Selection 383

Natural selection 385

Sexual selection 386

Mathematical theories of selection-based speciation 387

Speciation by Drift 387

Peak shift models 388

Theoretical Criticisms 394

Recent Peak Shift Models 396

The Data 398

Evidence from the laboratory 398

Evidence from nature 401

Conclusions 410

12 Speciation and Macroevolution 411

Rates of Speciation 411

What is a speciation rate? 412

Theory and speciation rates 413

Calculating speciation intervals 416

Extreme rates of speciation 425

What is the effect of biogeography? 427

Conclusions 428

Factors Affecting Speciation Rates 429

Tests for the effects of key factors 431

Distinguishing speciation from extinction 435

The data 436

Conclusions 441

Species Selection 442

Appendix: A Catalogue and Critique of Species Concepts 447

Genotypic Cluster Species Concept 447

Recognition Species Concept 451

Cohesion Species Concept 452

Evolutionary Species Concept 456

Ecological Species Concept 457

Phylogenetic Species Concepts 459
