Statistics without Math

WILLIAM E. MAGNUSSON,
Instituto Nacional de Pesquisas da Amazônia, Brazil

GUILHERME MOURÃO,
Empresa Brasileira de Pesquisas Agropecuárias Pantanal, Brazil
# Table of Contents

**Chapter 1**  
**Introduction**  
What Is Sampling Design?  6  
What We Hope You Get from This Book  10  
*Outline of the book*  11  

**Chapter 2**  
**Flow Charts and Scientific Questions**  14  
Constructing an Initial Model  16  
*Three types of questions*  18  
How Big Is Your Problem?  21  
*Where to go from here?*  23  

**Chapter 3**  
**Describing Things: Some “Scientific” Conventions and Some Useful Techniques**  24  
How to Give a False Impression with a Computer  30  

**Chapter 4**  
**How Much Evidence Is Enough?**  32  
How Good Is Your Information?  33  

**Chapter 5**  
**When Highly Improbable Means Very Likely**  40  
How Textbooks Tell the Story  46  
How Statisticians Count Independent Observations  47  
Understanding the Statistical World with Ease  49  

**Chapter 6**  
**How to Avoid Accumulating Risk in Simple Comparisons**  52  
What Sort of Risk Are We Worried About?  52  
Using Variability to Recognize a Difference  54  
An Important Assumption  57  
Partitioning Variance  59  

**Chapter 7**  
**Analyses for a World with All Shades of Gray**  62  
What Sort of Risk Are We Worried About?  62  
Putting the World into Boxes  63  
Describing a Straight World  66  
How Good a Fit Is the Model?  68  

**Chapter 8**  
**Real-World Problems: More Than One Factor**  71  
Adding Things Together  72  
Adding Partitioned Variability  74  
Checking Assumptions with Partial Plots  75  
Interactions  76  

**Chapter 9**  
**Which Variables Should I Analyze Statistically?**  78  
Artificial Intelligence  79  
Computer Generated Phantom Variables  83
Chapter 10 More Complex Models: How to String Things Together 87
Estimating Direct Effects 89
Estimating Indirect Effects 90
Some Problems with Path Analysis 91

Chapter 11 Straightening the World: Transformations and Other Tricks 93
Trial and Error Estimates without Transformation 95
Other Deviant Methods 96
General Linear Models 97
Maximum Likelihood 97
Pitfalls in Nonlinear Estimation 99

Chapter 12 Multivariate Statistics: Cutting Down the Trees to Better See the Forest 100
Graphs of Gradients 101
Hypothetical Gradients 104
More Than One Dimension 108
Eigenvector Analyses 109
Deep Culture: Significance Tests 111
Association Matrix (Mantel) Analyses 113
Canonical Analyses 114
Discriminating between Groups 116
Categories that Grow on Trees 117
Selecting Variables 120
Multivariate Indices that Masquerade as Univariate Variables 121
Know What You Are Looking for before You Start 122

Chapter 13 How to Write Better Backwards 124
A Simple Conceptual Scheme 125
Annoying Yet Important Details 127
"Why" Questions 129
A Final Comment 130

Chapter 14 Tips for Teachers
This chapter, intended for instructor use only, is not included in the printed book and can be found online at: www.sinauer.com/swm and also at: www.editoraplanta.com.
